Education

BMS College of Engineering

Bachelor of Engineering in Computer Science

Bengaluru, India

Expected 2028

- CGPA: 8.3 (Third Sem)
- Relevant Coursework: Data Structures (C), OOP (Java), DBMS, Computer Organization, Calculus I–III

Experience

Study

Feb 2026 – Present

Intern

Remote

- Built an LLM-based evaluation pipeline for OCR-extracted handwritten text that identifies question-answer pairs from inconsistent exam and note-style formatting.
- Developed backend onboarding flows with Google/Microsoft OAuth, email-password signup, email validation, and OTP-based forgot-password reset; designed prompt-driven answer scoring across relevance, completeness, correctness, clarity, and coherence.

Cram & Conquer

Dec 2025 – Present

Frontend Developer Intern

Remote

- Performed keyword research and built responsive landing pages in React/HTML/CSS to improve readability, SEO structure, and search visibility.

Open Source Contributions

Kubernetes (Minikube)

Go, Networking

Merged PR #22451: fixed `minikube mount` on macOS with the Podman driver by adding `host.containers.internal` support for routable host access.

Kubernetes (Core)

Go, Concurrency

Merged PR #135759: fixed a race condition in the CEL admission policy compiler by analyzing concurrent map access and implementing thread-safe locking to prevent compiler panics during policy evaluation.

Kubernetes (Minikube)

Go, System Architecture

Merged PR #22277: resolved a nested VM detection bug for macOS by updating the virtualization driver to correctly identify Apple Hypervisor capabilities.

Projects

BorderBridge — GitHub

React, TypeScript, FastAPI, Supabase, XGBoost

Built a refugee identity reconstruction and case-management platform with authority/refugee portals, explainable confidence scoring, evidence tracking, and referral workflows.

JeevBandhu — GitHub

Python, AI Models, Prompt Engineering

Integrated context-aware AI assistance into the platform using prompt engineering to improve response quality and relevance.

OCR QA Segmentation — GitHub

Python, Machine Learning, OCR

Built an OCR pipeline to segment document layouts and extract text for automated question answering.

Waggle MCP — GitHub

Python, Graph Memory, Kubernetes

Built a graph-based persistent memory system for AI agents using knowledge graph nodes/edges for decisions and contradictions; evaluated on ConvoMem, MemBench, and LongMemEval; added observability with Kubernetes deployment; achieved token-efficiency gains vs RAG (claimed ~2–4x).

Achievements & Research

- Winner, **Mega Hackathon** under the **Digital Border Management System** category, hosted by Protocol Club in collaboration with Team Codelocked, BMS College of Engineering (March 13–14, 2026).
- Currently working on a research paper comparing LLMs and RLMs across reasoning behavior, response quality, and system trade-offs.
- Active member of Team Code Locked and BMS MUNSOC, participating in competitive programming and Model UN conferences.

Technical Skills

Languages: Java (OOP), C, Python, JavaScript, TypeScript, SQL

Frontend: HTML, CSS, React.js, Tailwind CSS, Figma

Backend/DB: FastAPI, Supabase, MySQL, DBMS

Cloud/Tools: Kubernetes, Git, GitHub, Vercel, Render, Cursor, Claude

Concepts: SEO, Prompt Engineering, Machine Learning, Computer Architecture
